

DX-100, DX-100B, VF-1 Replacement Dial and Fiducial

These replacement frequency calibration dials for the Heath DX-100 and DX-100B transmitters and for the VF-1 VFOs are made from plastic that is considerably heavier than the original dials which often require replacement because they have become warped. Because the dial is thicker than the original dial an aluminum center plate is provided to mate with the vernier drive on the front panel of the unit.

Price for each dial is \$39.95 post paid CONUS except for the State of Texas where state sales tax has to be added. Price for each dial for shipping within the State of Texas is \$43.25. For Canadian orders the price is \$42.95 (US) post paid. For shipping to other locations please contact Z-Communications Company at zcomco@sbcglobal.net

Replacement fiducials (the green plastic with the "slit" for reading the frequency) are also available. These are of thinner plastic than the original fiducial but work quite well. These are to replace the original fiducial which is often broken in two parts.

Price for each fiducial is \$11.00 post paid CONUS except for the State of Texas where state sales tax has to be added. Price for each fiducial for shipping within the State of Texas is \$11.91. For Canadian orders the price is \$13.00 (US). For shipping to other locations please contact Z-Communications Company at zcomco@sbcglobal.net

Special price for both the dial and the fiducial: \$45.00 post paid CONUS except for the State of Texas where state sales tax has to be added. Price for both for shipping within the State of Texas \$48.71. For Canadian orders the price is \$49.00 (US) post paid. For shipping to other locations please contact Z-Communications Company at zcomco@sbcglobal.net

Please note that the dials have a "frosted" appearance just like the original dials. That is they are translucent and not transparent.
